# CONTENT OF THE LOGBOOK

INTRODUCTION DEFINITION STRUCTURE OF BASIC TRAINING TRAINING IN PHONIATRICS THE TRAINING PROGRAMME ASSESSMENT AND EXAMINATION

#### LOGBOOK OF TRAINING SECTIONS

- (1) Basic Objectives
- (2) Voice Disorders
- (3) Speech/Articulation Disorders
- (4) Developmental Language Disorders
- (5) Acquired Language Disorders
- (6) Dyslexia and Dysgraphia
- (7) Fluency Disorders
- (8) Hearing Disorders
- (9) Swallowing Disorders

#### **APPENDIX (FORMS)**

- I. IDENTIFICATION OF TRAINEE
- II. BASIC TRAINING PERIODS
- **III. PHONIATRIC TRAINING SITES**
- IV. CLINICAL SPECTRUM AND PATIENT GROUPS OF THE TRAINING CENTRE
- V. ATTENDANCE AT ACCREDITED COURSES AND MEETINGS
- VI. SCIENTIFIC ENGAGEMENT
- VII. SELF EVALUATION OF SOFT SKILLS
- VIII. TRAINER EVALUATION OF SOFT SKILLS
  - IX. SELF-ESTIMATION OF THE INDIVIDUAL EMPHASES IN PHONIATRIC TRAINING
  - X. COMPLETION OF TRAINING

### INTRODUCTION

The Union of the European Phoniatricians (UEP) has developed a European training programme for Phoniatrics as a draft version of a prospective UEMS guideline for Phoniatric training centres within Europe. This programme will serve as a guideline for Trainers and Trainees in this Speciality moving towards a continuous and expanding overall standard of knowledge and competency.

### DEFINITION

Phoniatrics is the medical field for communication disorders, concerned with functions and diseases of voice, speech, language, hearing (especially in so far as hearing impairment has its effects on any of the areas previously mentioned), and swallowing. In practise, Phoniatrics is a multidisciplinary discipline combining information from medical and non-medical sciences. In addition to general medical procedures, encloses investigations and treatment **Phoniatrics** complex competencies in the fields of cognition, learning abilities, psychological behaviour, and rehabilitation procedures. The most important medical fields for the clinical practise are otorhinolaryngology (ENT), neurology, neuropediatrics. (child) psychiatry, pediatrics, radiology, genetics, endocrinology, dentistry and gerontology. On the other hand, the fundamentals of many non-medical disciplines as, for instance. linguistics, phonetics, (neuro-) psychology, pedagogy, acoustics, informatics, and communication sciences are also necessary to be included in phoniatric training programmes.

For historical reasons the status of Phoniatrics varies internationally from an independent Specialty to a Subspecialty of Otorhinolaryngology approved by national health care authorities or medical associations. In some countries there are no established training programmes at all. Therefore, it is the goal of this European training programme to support those physicians who are interested to specialize in phoniatrics by visitation and rotation activities of the UEP/UEMS. The emphasis put on various fields of phoniatrics, in those countries having developed this specialty, shows international and national variation. For instance, in some phoniatric units the diagnostics and rehabilitation of developmental language disorders or hearing impairment of children comprise the main work-load. It is also common that the phoniatricians are mainly responsible for diagnostics and conservative and/or surgical treatment of voice-disordered patients. When a training programme for an individual medical doctor is planned it should take into account the national and local demands of the society as well as the special interests of the attendee. In fact, the field is so wide that *de facto* sub-specialisation is highly recommended.

### STRUCTURE OF BASIC TRAINING

In general, before entering the Specialist training programme basic studies are required. These may include service in public health care system and always training in ENT and Audiology (when not included in the specialist training programme). The ENT service can be realized as a full ENT training programme or as an appropriate

training period which goal is at least to teach the trainee to master the examination methods and the most common treatments of the discipline. After the audiological training period (when applicable) the trainee should master at least the most common audiological examination and rehabilitation methods and organisation of audiological services. In addition, the basic training may include training periods in many other disciplines depending on the outlines of the special training program. Also (scientific) work at a department of phonetics, logopedics or physiology or other adequate institutions can be accepted as basic training in some cases.

### TRAINING IN PHONIATRICS

The trainee should enter the specialist training program after passing the basic training period usually at a Phoniatric Department of a University Hospital. The training includes supervised clinical work and theoretical studies (literature, training classes and courses). It is recommended that, in addition to a supervisor (director of training) the trainee has several trainers with different focuses on the field. The trainee and the supervisor are mutually responsible so that after the training the

#### Specialist in Phoniatrics has the following knowledge, experiences and skills:

- He/She masters the preventative, diagnostic, treatment and rehabilitation principles of the discipline for each age of patients
- He/She knows the structures, functions and dysfunctions of the communications organs and masters the treatment and rehabilitation methods as well as most important methods of alternative and augmentative communication (AAC)
- He/She understands the geriatric aspects of the discipline
- He/She masters instrumental examination methods of the discipline
- He/She is able to work in multidisciplinary teams
- He/She is able to teach health care and non-health care professionals on Phoniatric issues
- He/She has learnt methods for finding and adopting new phoniatric information
- He/She is able to participate in the development and planning processes of the discipline
- He/She is able to give information to the public on phoniatric issues
- He/She understands the importance and application of evidence-based treatment
- He/She is familiar with the administration and legislation of the health care system

### THE TRAINING PROGRAMME

The training programme will consist of the following elements and sections:

- (1) Basic Objectives
- (2) Voice Disorders
- (3) Speech/Articulation Disorders
- (4) Developmental Language Disorders
- (5) Acquired Language Disorders
- (6) Dyslexia and Dysgraphia
- (7) Fluency Disorders
- (8) Hearing Disorders
- (9) Swallowing Disorders

In respect of the kind of knowledge or skills that are demanded within this training programme, there are different categories to record the stepwise stages of competence of the trainees. The different stages of experience and independent competence are not structured along a defined course of years of education yet, to respect the present variety of education within the different countries.

In respect of fundamental knowledge and background the skills of the trainee are recorded with date of achievement in respect of the following two categories:

- (b) Trainee has <u>basic</u> theoretic knowledge and experience in respect of basics of phoniatrics as such or of a special training section.
- (a) Trainee has <u>advanced</u> theoretic knowledge and experience in respect of basics of phoniatrics as such or of a special training section.

For the majority of contents the knowledge, the advisory competence, the performance ability of special skills, etc. are recorded with date of achievement in respect of the following three categories:

- (b) Trainee has <u>basic</u> knowledge by theory or demonstration in respect of certain diagnostic or therapeutic procedures, computerized training, biomedical/prosthetic fitting, and multidisciplinary patient management
- (s) Trainee can perform certain procedures but requires <u>supervision</u>/assistance by the trainer in respect of diagnostic or therapeutic procedures, computerized training, biomedical/prosthetic fitting, and multidisciplinary patient management
- (i) Trainee performs the procedures/management <u>independently</u>/alone with the trainer available

The logbook will be used in relation to European training exchange programmes and will provide an introduction into advanced skills of the Phoniatric Specialty.

### **ASSESSMENT AND EXAMINATION**

- 1. Assessment of the theoretical and practical knowledge of the trainee may be included in the European Training programmes. Trainees should refer to their National requirements.
- 2. To achieve the award of the certificate of recognition, the trainee must reach the expected level of knowledge and skills approved by the European Board before being eligible to practise as an independent Phoniatrician.
- 3. Each trainee must be familiar with all diagnostic, preventative, therapeutic and rehabilitative management associated with the discipline of Phoniatrics.
- 4. The trainer will be responsible for confirming the competence of the trainee for the procedures and management outlined in the logbook in the columns headed "general". He/she will sign on the date when competency is achieved in the final column.
- 5. The contents of the logbook will be continuously updated by the European Board with respect to new developments.

## LOGBOOK OF TRAINING SECTIONS

The starting point of this logbook is to introduce the various areas of Phoniatrics within which a training programme can be tailored to meet the national and local demands as well as when ever possible the special interests of the trainee. After all, it is the great versatility of our discipline that has offered fascinating challenges for many generations before us and, no doubt, also will for those to come.

The trainee is expected to know in detail the anatomy, physiology and pathology of voice, speech, language, hearing, and swallowing functions, as well as, the influence of genetic, immunologic, endocrinologic, environmental, social, psychological, behavioural, and developmental factors on these functions. In addition, the neurophysiological principles of memory, language and speech motor processes of the central nervous system should be mastered when language and learning disorders are emphasized in the training program.

The supervisor has to follow up the trainee's progress and development of the contents of the training together with the trainee and other trainers. The progress is reported using the following logbook.

# (1) Basic Objectives

Theoretical Fundamentals	Performance Category (b), (a)	Date	Signature Trainer
history of the discipline			
acoustics of articulation			
voice and room acoustics			
aerodynamics of voice and speech			
biomechanics of ear function, voice, and speech			
ergonomics			
phonetics and linguistics			
neurolinguistics and neuropsychology			
neurocognitive sciences			
fundamentals of singers' training			
special knowledge about speech training			
effectiveness of treatment/rehabilitation			
WHO classification of diagnosis and functioning			
knowledge of legislation relating to national and			
european health care systems			
knowledge of legislation relating to national and			
european rehabilitation programs			
knowledge of legislation relating to national and			
european occupational safety and health			
other			

# (2) Voice Disorders

Diagnostics	Performance Category (b), (s) or (i)	Date	Signature Trainer
diagnostic interview			
auditory/visual/palpatory examination			
voice-related quality of life questionnaires			
perceptual evaluation (GRBAS, RBH)			
indirect laryngoscopy			
rigid video/digital laryngoscopy			
rigid video/digital laryngostroboscopy			
flexible transnasal video/digital laryngoscopy			
flexible transnasal video/digital			
laryngostroboscopy			
high-speed recordings			
videokymography			
insufflation test			
laryngeal electromyography			
electroglottography			
field recordings of voice production			
stability of sustained phonation			
maximum phonation time			
mean fundamental frequency			
voice range profile (phonetography)			
speaking voice profile			
aerodynamic measurements			
glottal flow waveform analysis			
voice perturbation measurements			
CT/MRI of vocal tract/larynx			
nasalance measurement			
other			

Prevention	Performance Category (b), (s) or (i)	Date	Signature Trainer
general principles and risk analysis			
vocoergonomics			
professional speakers/singers			
AAC: voice amplifiers, phone technology			
room acoustics			
other			
Rehabilitation	Performance Category (b), (s) or (i)	Date	Signature Trainer
coordination of rehabilitative measures			
initiation and supervision of voice therapy			
executed by logopedist/SLP			
voice therapy by phoniatrician			
initiation and supervision of			
physiotherapy/osteopathy			
physiotherapy/osteopathy by phoniatrician			
voice prosthesis/electrolarynx			
AAC: voice amplifiers, phone technology			
computerized voice training			
knowledge of national legal regulation of invalidity			
and special care programmes			
voice fitting in transsexuals			
other			
Medical Treatment	Performance Category (b), (s) or (i)	Date	Signature Trainer
general principles of drug treatment in dysphonia			
basic knowledge in respect of general drug			
treatment influences on voice function			
basic understanding of hormonal medication			
botulinum toxin treatment			
other			

Phonosurgery/Surgery	Performance Category (b), (s) or (i)	Date	Signature Trainer
general principles of indications and techniques			
(understanding) anesthesiological methods:			
endotracheal intubation, JET ventilation,			
spontaneous respiration			
anaesthesiological methods: local anaesthesia			
use of cold instruments			
use of LASER			
indirect vocal fold surgery			
suspension microlaryngoscopic vocal fold			
surgery: exophytic lesions			
suspension microlaryngoscopic vocal fold			
surgery: intracordal lesions			
laryngeal framework surgery: approximation			
laryngeal framework surgery: expansion			
laryngeal framework surgery: tensioning			
laryngeal framework surgery: relaxation			
pitfalls and complications of phonosurgery			
understanding consequences of various surgical			
procedures on voice function			
other			

# (3) Speech/Articulation Disorders

Diagnostics	Performance Category (b), (s) or (i)	Date	Signature Trainer
diagnostic interview			
auditory/visual/palpatory examination			
evaluation of speech, phonetic level			
phonological evaluation of speech			
evaluation of speech, prosodic level			
evaluation of speech intelligibility			
examination of cranial nerve function			
speech motor examination protocol			
oral motor examination protocol			
classification of dysarthria			
evaluation of velopharyngeal function, perceptual			
evaluation of velopharyngeal function,			
aerodynamic			
evaluation of velopharyngeal and laryngeal			
function, fiberoptic			
classification of cleft palate			
spectral speech analysis			
objective speech motor analysis			
nasometrics/nasalance (acoustic)			
electromyography			
ultrasonography (B-Mode, M-Mode)			
CT/MRI and other radiology			
other			
Prevention	Performance Category (b), (s) or (i)	Date	Signature Trainer
genetic counselling			
diagnostics of hearing impairments (cf. (8))			
basical knowledge in dentistry			
basical knowledge in psychomotoric development			

Rehabilitation	Performance Category (b), (s) or (i)	Date	Signature Trainer
coordination of rehabilitative measures			
supervision of speech therapy executed by			
logopedics/SLP			
speech therapy by phoniatrician			
supervision of physiotherapy			
physiotherapy by phoniatrician			
biofeedback i.e. by sonography			
AAC: communicators and strategies			
oral motor devices			
prosthesis			
computerized rehabilitation			
deep brain stimulation			
other			
Medical Treatment	Performance Category (b), (s) or (i)	Date	Signature Trainer
general principles of drug treatment			
other			
Surgery	Performance Category (b), (s) or (i)	Date	Signature Trainer
principles of cranio-facial surgery			
principles of maxillo-oral surgery			
principles of velo-pharyngeal surgery			
understanding consequences of various surgical			
procedures on articulation			
other			

# (4) Developmental Language Disorders

Diagnostics	Performance Category (b), (s) or (i)	Date	Signature Trainer
psychomotor, cognitive, auditory and language			
stages of normal children of different ages			
diagnostic interview of parents			
developmental questionnaires			
evaluation of verbal communication: phonetic,			
phonological, prosodic, morphological, syntactic,			
semantic, and pragmatic level			
evaluation of speech perception			
evaluation of non-verbal communication			
estimation of linguistic and general cognitive			
developmental stage			
estimation of behaviour and attention			
neurological examination of children			
speech motor examination protocol			
oral motor examination protocol			
scaling of psychomotor, vestibular and			
kinaesthetic development			
differential diagnostics and subtypes of primary			
and secondary language impairment			
syndromes associated with language impairment			
multilingual speech and language acquisition			
genetics of language impairment (i.e. Fox P2-			
gene)			
objective speech motor analysis			
interpretation of the results of logopedics/SLP			
examinations			
interpretation of results of occupational therapy			
laboratory examinations of developmentally			
delayed children			
clinical neurophysiology			

sonography of the tongue (B-Mode, M-Mode)			
basics on Electro-Encephalography (EEG)			
Sonography/CT/MRI of the brain			
and other radiologic procedures			
other			
Prevention	Performance Category (b), (s) or (i)	Date	Signature Trainer
linguistic enrichment principles			
principles of augmentative communication			
methods			
genetic counselling			
diagnostics of hearing impairments (cf. (8))			
other			
Rehabilitation	Performance Category (b), (s) or (i)	Date	Signature Trainer
Rehabilitation coordination of rehabilitative measures		Date	-
